Thorough guideline! Its this type of good read. It is really simplistic but shocks from the 50 percent from the publication. It is extremely difficult to leave it before concluding, once you begin to read the book.

Ashley-Emile, in an interesting paper on ainhum, is inclined to trace a connection between ainhum and leprosy, regarding the former as a modified expression of the latter in persons of a leprous diathesis. His argument is rather laboured, but there may be something in the anatomical reasons he advances for the seat of election of the disease. He believes the flexor tendon of the small toe to be specially subject to strain during the act of carrying heavy burdens, and that this, combined with an enfeebled nerve supply, leads to fibroid degeneration round the joint with resulting occlusion of arteries and strangulation of the toe, which enlarges owing to venous dilatation. Wellman, on the other hand, adduces evidence to show that ainhum and leprosy are not related, and in a later paper suggests that the chigger may play an important part in the development of the complaint. He points out that this theory accounts in large measure for the geographical distribution of the disease. Apart from these theories, ainhum has been stated to be due to injury, to be a trophoneurosis, a circumscribed scleroderma, a congenital, spontaneous amputation, and the result of self-mutilation by ligatures, wearing of toe-rings, etc. Manson favours the traumatic theory, and cites a similar condition affecting the tail of a pet monkey. There is nothing new to record regarding treatment. Ainhum occurs...
